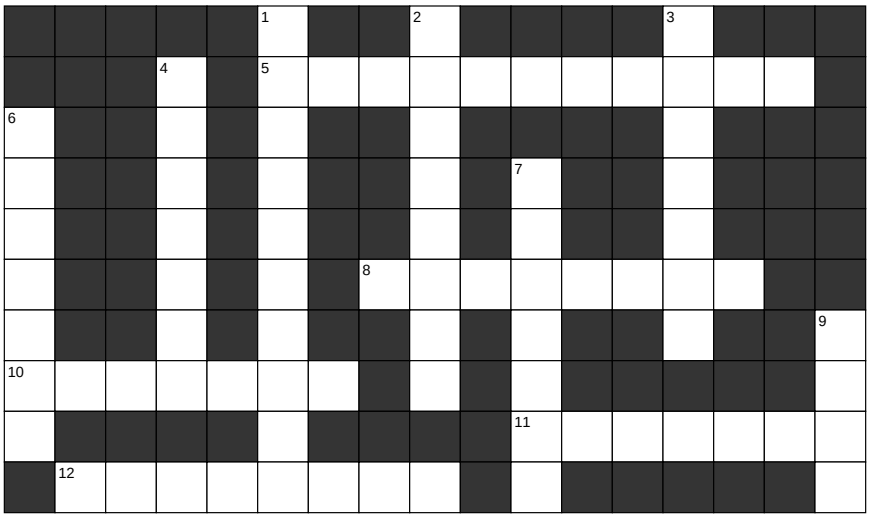
Lists and Indexing

Crossword - Chapter review

Use chapter concepts to solve the clues. Omit spaces and punctuation in the grid.



Across

5. This is a _____: nested values remain shared.

8. _____ is postfix: `expr[expr]` applies after any expression that produces a list or a string, not only an identifier.

10. Strings can be _____ the same way.

11. The values so far have been immutable: _____, strings, and booleans.

12. `numbers[1]` is the element at _____ `1`, which happens to be the number `20`.

Down

1. _____ can change which value an identifier refers to, but it cannot change anything inside those values.

2. The _____ do not need to share a type; `mixed` holds a number, a string, and a boolean at once.

3. _____ about numbers, strings, booleans, conditionals, or loops changes.

4. It is our first _____ value.

6. Indexing is _____: `expr[expr]` applies after any expression that produces a list or a string, not only an identifier.

7. The list `scores` was not replaced; its first _____ was.

9. A _____ holds values in order and can be modified in place.
