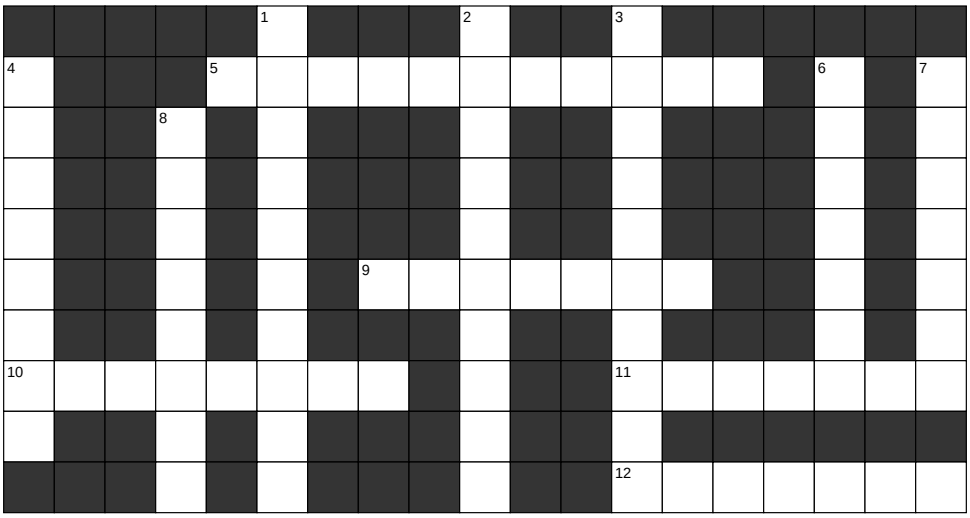
Booleans and Comparisons

Crossword - Chapter review

Use chapter concepts to solve the clues. Omit spaces and punctuation in the grid.



Across

5. This version adds boolean literals, comparisons, explicit _____, and a type query.

9. Relational operators _____ operands and produce truth values.

10. (2) Vertex uses these rules: _____ accepts numbers, strings, and booleans.

11. (1) Vertex already computes numbers and _____.

12. _____-to-boolean conversion treats zero as false and every nonzero value as true, including negative numbers.

Down

1. The _____ contracts also broaden: `number(42)` and `string("text")` now return their arguments instead of raising type errors.

2. It ignores surrounding whitespace but rejects `"true"`, exponent notation, and _____ expressions.

3. Character order follows Unicode code points, as in Python's string _____.

4. Comparing it with `40` _____ true.

6. The result is a _____: one of the two truth values, true or false.

7. The parser creates the node directly: The evaluator _____ the node's value.

8. The code is in `chapter-04-_____-and-comparisons/code`.
